

WELL WORKSHEET
Documentation of Truckee River Basin Water Wells
(For Submittal to the TROA Administrator)

Please check applicable boxes:

- Is the well a domestic well (see definition on last page)?
- Was the well drilled or under construction before May 1, 1996?
- Is the well a test or monitoring well, rather than drawing water to serve a beneficial use?
- Is the well located in Nevada or in the Lake Tahoe Basin as defined in Public Law 101-618?

If any of the above boxes are checked, please stop here. Your well is not subject to the requirements under Public Law 101-618 and the TROA.

Otherwise, please complete the remainder of worksheet.

Please send the completed worksheets to:

Department of Water Resources-Integrated Regional Water Management
North Central Region Office
Attn: Tim Nelson
PO Box 942836
Sacramento, CA 94236

(For Submittal to the TROA Administrator)

Reference:

Name or number used to identify well: _____

For planned wells, date construction is expected to begin?: _____

For completed wells, date construction began?: _____

Well Location:

Section: _____ **Township:** _____ **Range:** _____

Or well Coordinates (DMS): _____ (Latitude), _____ (Longitude)

Driving Directions:

Estimated Well Capacity (gallons/minute) _____ GPM

Does the well meet the criteria for the Special Zone in which it is located?

(see Special Zone criteria in the TROA Section 10.B.2)

Special Zone designation (if applicable):

Well Distance(s):

From	Distance (feet)	Note:
The Truckee River:		Not applicable for the Donner Lake Special Zone, Northstar/Placer County Special Zone, and the Tahoe City Public Utility District Special Zone 1.
The Little Truckee River:		Only applies to public transient non-community water systems, i.e. public trailheads/ campgrounds.

WELL WORKSHEET

 (For Submittal to the TROA Administrator)

Well distance to streams, springs, lakes and ponds: List the distances of the well from (and names, if any) all streams, springs, lakes and ponds which are shown on the official set of Geographic Features Maps and are within 500 feet of the proposed well ():

From*	Water Body Name (if applicable):	Distance (feet)
Streams:		
Springs:		
Lakes:		
Ponds:		

* Not applicable for the Tahoe City Public Utility District Special Zone 1

Please describe and/or attach any information supporting why the well is in compliance with any other Special Zone criteria:

If no other Special Zone, please describe and attach any information supporting the P.L 101-618 requirement that this well has been designed to minimize any short-term reductions of surface stream flows to the maximum extent feasible:

Well Depth Information:

From	Feature	Depth (feet)
Surface to:	First impervious layer or aquitard*	
Surface to:	Depth to which well is sealed Type of Seal:	

*If the well is in the Truckee Donner Public Utility District, Martis Valley or Glenshire Special Zone

(For Submittal to the TROA Administrator)

Please locate the well on the Geographic Features Maps (see definition, bottom of page 6) and draw a circle (to scale) around the well at a 500 foot radius to show the location of the well with regard to geographic features identified on the map. Please attach locating the well (this page):

WELL WORKSHEET

(For Submittal to the TROA Administrator)

On an 8-1/2 x 11 inch sheet of paper, sketch the geographic location of well with respect to any perennial stream(s), intermittent stream(s), spring(s), lake(s) or pond(s) (labeling each as such) which are within 200 feet of the (proposed) well and are not shown on the official set of Geographic Features Maps but are apparent to the owner or person signing this request through a reasonable visual inspection of the area. On the sketch, identify the distance between the well and each feature on the map.

Please note:

1) the definitions of geographic features on the last page, 2) it is unnecessary to include features that are not identified in the criteria for the Special Zone, and 3) the person making a visual inspection.

WELL WORKSHEET
Documentation of Truckee River Basin Water Wells
(For Submittal to the TROA Administrator)

Definitions from the Draft TROA Article 10:

Geographic Features: Refers to intermittent and perennial streams, springs, lakes and ponds.

Domestic Well: A well which is constructed for and serves domestic water to a single-family residence and, regardless of the size of the parcel on which the residence is located, water for the irrigation of not more than one acre.

Geographic Features Maps: Defined in TROA Section 10.A.4 and, as of this writing, are the latest set of the 1:24000 scale USGS topographical maps. In the future, the maps may be updated periodically and maintained by the TROA Administrator as provided in TROA.

Intermittent Stream: A stream which: (1) is not perennial; (2) flows in a definite channel or watercourse seasonally in most years and less often during infrequent periods of severe drought; and (3) has its source rain, snow or a spring.

Lake: A lake which: (1) is more than three acres in surface area at maximum volume; and (2) is located on the Truckee River, Little Truckee River, a perennial stream or an intermittent stream. Note – Martis Creek Reservoir is governed by other criteria in TROA Section 10.B than for lakes.

Perennial Stream: A stream which: (1) flows in a definite channel or watercourse, (2) flows throughout the year except for infrequent periods of severe drought when the stream may not flow, and (3) has as its source rain, snow or a spring.

Pond: A pond which: (1) is three acres or less in surface area at maximum volume; and (2) is located on the Truckee River, Little Truckee River, a perennial stream or an intermittent stream.

Special Zone: An area described in TROA Section 10.B.2 in which wells meeting specified criteria automatically comply with Section 204(c)(1)(b) of the Settlement Act.

Measurement of Distance: For purposes of determining the distance between a well and the Truckee River, the Little Truckee River, a stream, lake, pond or spring only the horizontal component of the distance shall be used, and the measurement shall be from the centerline of a river or a stream, from the ordinary high water line of a lake or a pond, and from the center of a spring to the closest unsealed portion of the well below ground level into which water may flow.
